1 Standard L^AT_EX Article

This document illustrates the appearance of an article created with the shell **Standard L^AT_EX Article** or the shell **Blank - Standard L^AT_EX Article**. Both shells produce documents with centered title information, left-justified headings, theorem environments, and appendices.

```
40 S$ = ""
50 FOR I = 1 TO N
60 S$ = S$ + "*"
70 NEXT I
80 PRINT S$
90 INPUT "Do you want more stars? "; A$
100 IF LEN(A$) = 0 THEN GOTO 90
110 A$ = LEFT$(A$, 1)
120 IF A$ = "Y" OR A$ = "y" THEN GOTO 30
```

The standard L^AT_EX shells provide the most general and portable set of document features. You can achieve almost any typesetting effect by beginning with a standard shell and adding L^AT_EX packages as necessary.

The document class base file for this shell is `article.cls`.
